

PRECIPITATION TREATED AT UNL DURING LARGE STORM EVENTS

Since **2017** we have completed the installation of PCSWCs that capture and treat **37,583 Cubic Feet (cu ft)** of stormwater in every storm.

To reference how big that is...
an olympic sized swimming pool is
88,000 cu ft.

We can also estimate that by **2023**
we should be capturing and treating
95,377 cu ft
during every storm or 1.08 Olympic pools
